

M3D5: Transcript & Protein Assays

* Notebooks due today - D

Announcements

- Final quiz and final FNT -- next lab (Tuesday)
- **Module 3 report due M3D7 (5/8), 5pm**
 - work in groups (tell me otherwise)
 - less formal, but clear and concise
- **Final project: Research Proposal Presentation M3D8 (5/13)**
 - More on next slide
- Day 7 lecture: Atissa is back (be there! -- presenting with a partner)
- Final lecture (5/15): class discussion/evaluation + Party!

No Off on Monday
Sunday 6:30 - 7:30 pm

Final project: Research proposal

★ **Manipulate** → **Model** → **Make**

Appropriate subject matter:

3 modules 109 → DNA/RNA Engineering → Synthetic Biology
Systems → Systems Biology, HTS technol.
Biomaterial/Cells → drug delivery
→ scaffolds T.E.

What is biological engineering?

Biology Question:

What kinase phosphorylates protein X?

- Novel screening method
- How can we quantify the rxn kinetics?
- Can we predict the phosphorylation?
(modeling → prediction)

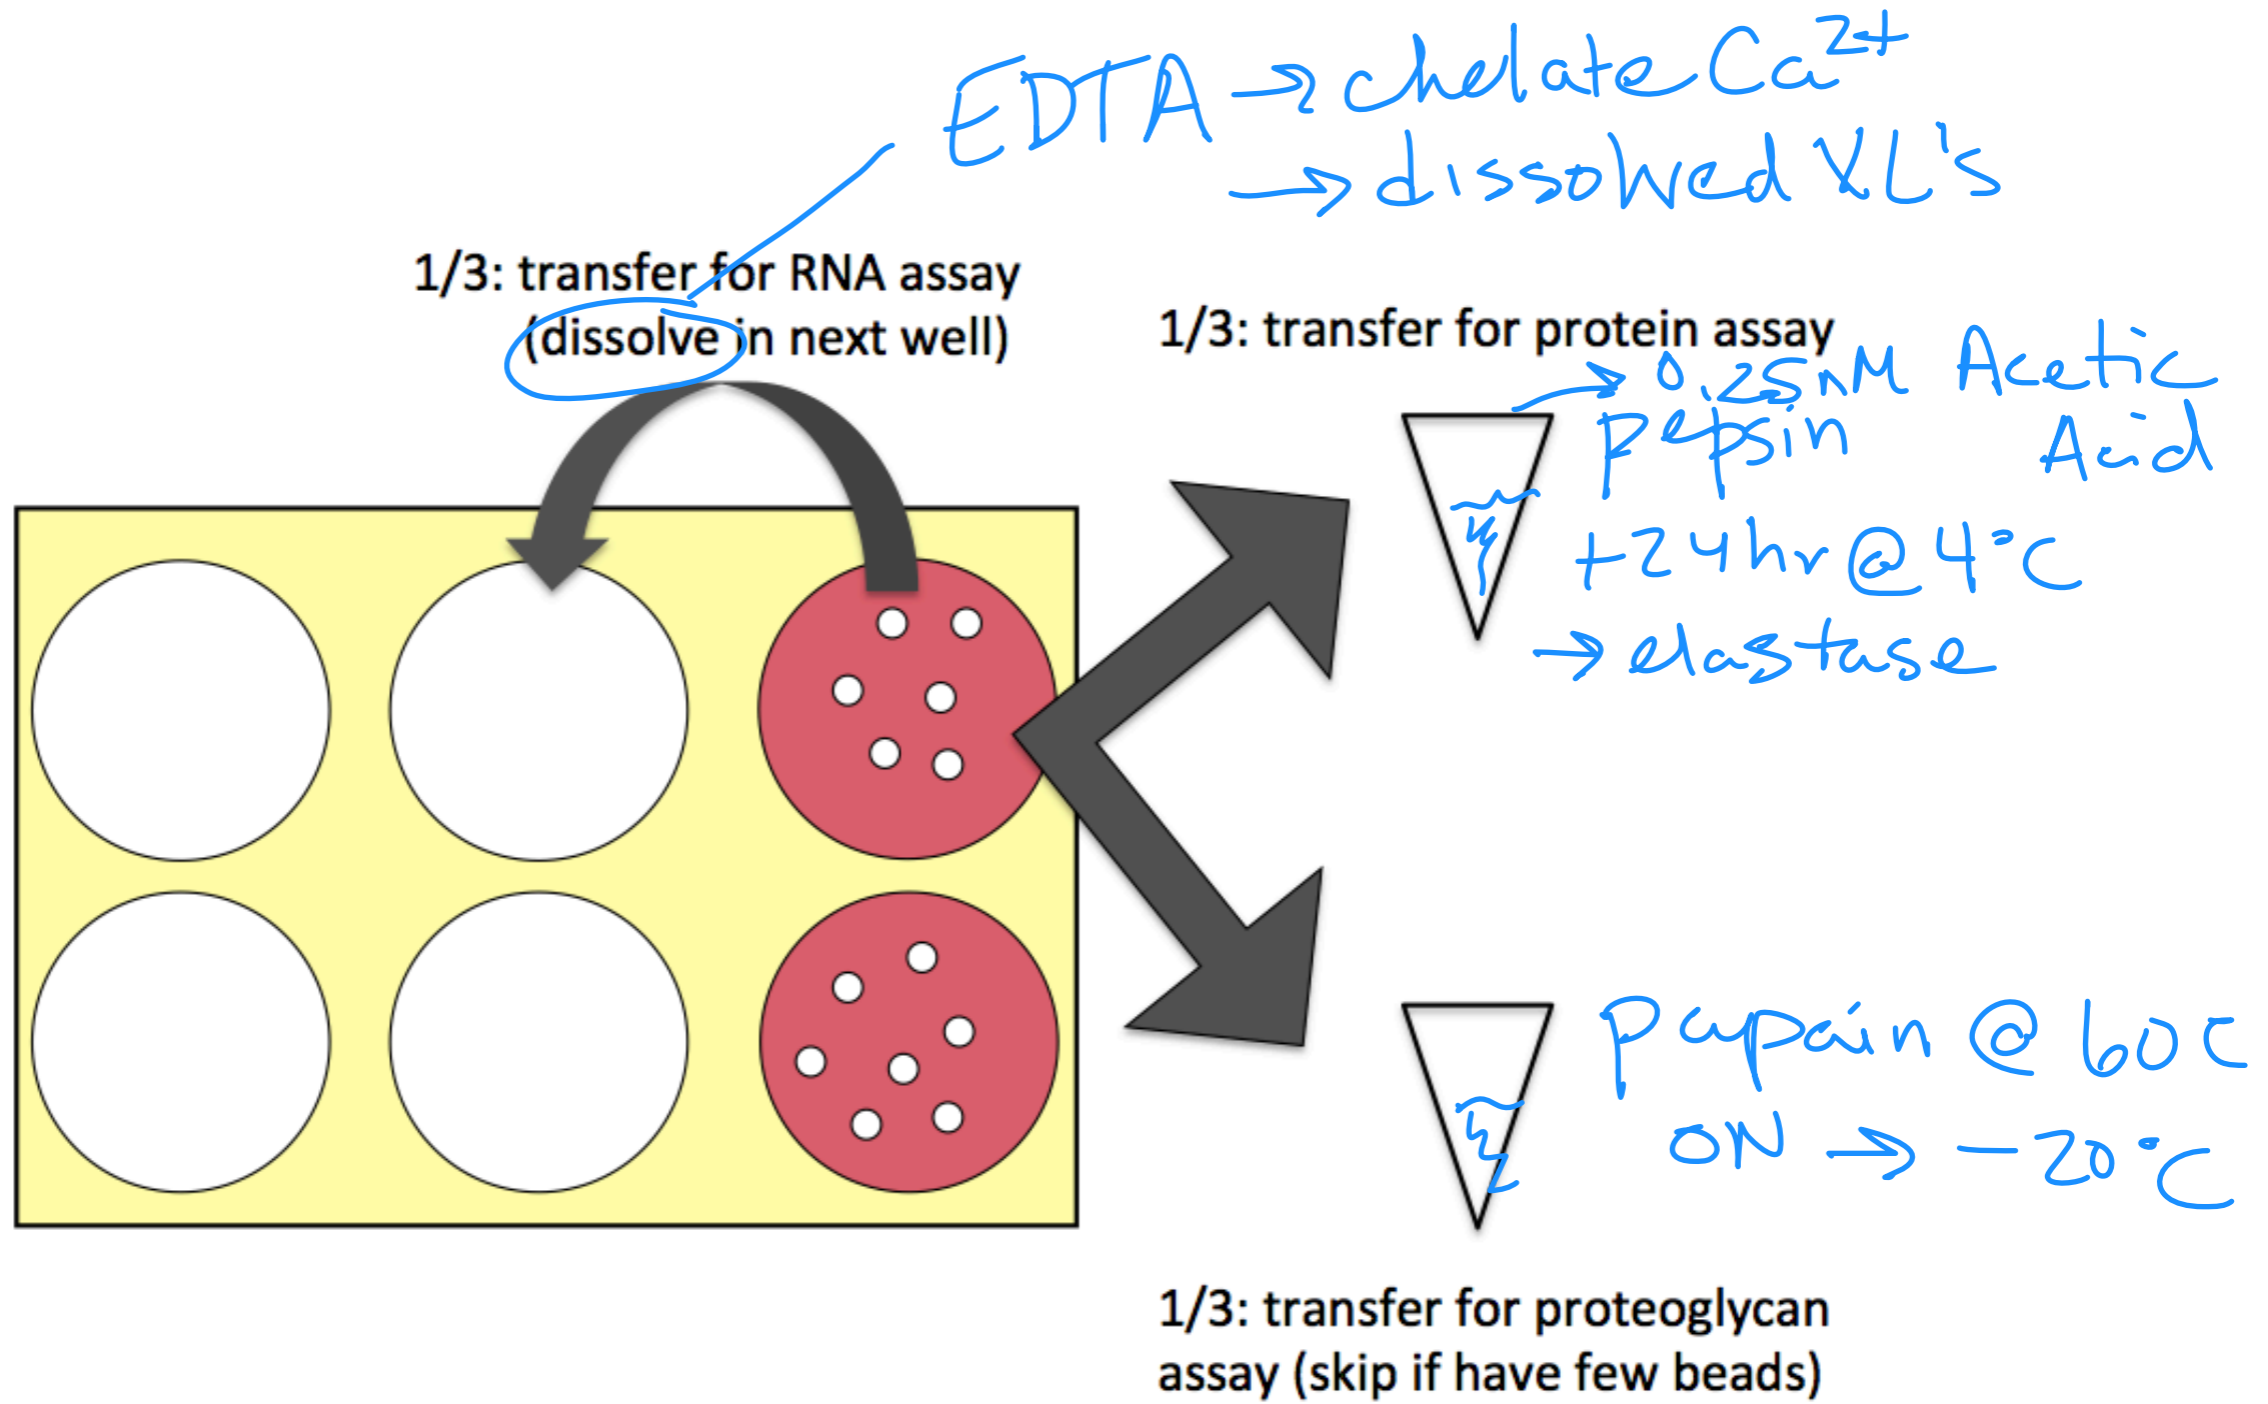

Appropriate scope:

think years, not months (2-3 yrs)

think big

think outside the 109 lab → talk to faculty

Review what we did last time:

ELISA:

1 adsorb proteins to the plate

2 wash/block → Milk

3 wash / Add α-CN Ab

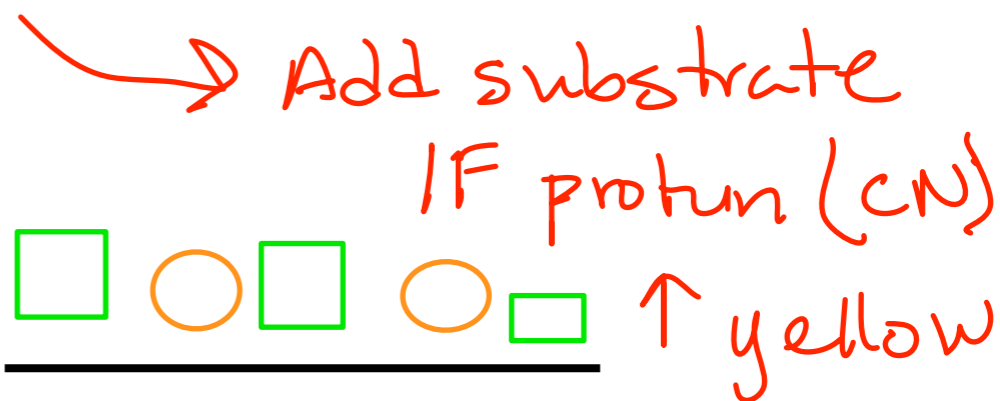

4 Wash

5 wash / Add 2-Ab α-Rb-AP

6

qPCR:

mRNA → cDNA

www.5prime.com

Sybr Green Dye

Real time tracking [DNA].

Threshold Cycle (Ct)

$\downarrow C_t \Rightarrow \uparrow \text{product}$

CNI } 2 conditions
CNI } 2-(duplicate) threshold
18S RNA }
 } → 12

Be very careful pipetting your samples today!
