

M3D I: Design Experiment

Announcements

- Module 2 Report due **Wednesday at 5pm**
 - ★ submit to 20109.submit@gmail.com
 - ★ free late day if you visit writing center
 - ★ methods/results -- me ; all else -- Alan
 - ★ OH tonight 7-10pm
- Next time, two shifts (1pm or 3pm) -- quiz before or after

Module 2 Reports

- Comments on Methods

- concise statements, higher-level subsections
- only report methods for experiments where you present the results
- Design --> Experiments --> Analysis
- remember kits -- did we deviate from those kits?

- Comments on Results

- tell a story -- what did you ask, what did you find, how did that lead you to the next question?
- concise statements! no interpretation
- subheadings should be informative
- SDS-PAGE vs. Bradford assay

Tissue culture environment

What is the 'cellular environment' *in vitro*?

1. Temperature = 37C
 2. Oxygen level -- ambient, normally
 3. CO₂ level (5%) -- NaHCO₃
 4. pH 7.2-7.4
 5. Humidity (>95%)
 6. [salt] -- osmolarity
- *Sterility -- absence of exogenous microorganisms

Bovine bone marrow stem cells in extracellular matrix

University of Oxford Bioengineering

Tissue culture medium

What do cells need to survive?

Food(s):

Non-essential amino acids:

L-glutamine

Why?
Components of biochemical Rxns for cell survival.

Cell culture media:
DMEM

Optimized:
[salt]
[vitamins]
[amino acids]
[glucose]

Non-food(s):

Antibiotics (Pen/Strep)
Antimycotics (AmpB)
Phenol Red -- Why??
pH indicator --
something is wrong!

Serum:

Growth factors,
lipids,
cytokines

Tissue engineering considerations:

scaffold/matrix

→ usually degradable, porous

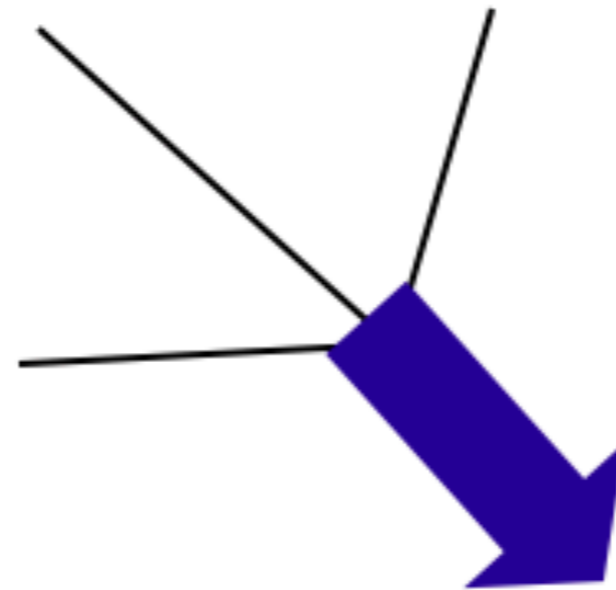

soluble factors

→ made by cells or synthetic
→ various release profiles

cells

→ precursors and/or differentiated
→ usually autologous

integrated implantable or injectable device

Controlling design parameters:

How will we compare across conditions?

Hemocytometer

Today in lab:

★ Tissue culture primer: See me if you have not done mammalian tissue culture in the past.

★ Experimental design:

1. Read/Skim 3+ papers to get ideas

- Read abstract.
- Skim methods.
- Skim results/discussion -- summarize in 1-2 sentences.
- Goal:

2. Make your plan!

- Vary one parameter: simple or sophisticated
- Check cell availability with teaching faculty
- Request materials and/or equipment as needed
- Goal:
